FAKE TOXINS & FILLERS – WHAT WE HAVE LEARNED

Michael Gold⁽¹⁾

Gold Skin Care Center / Tennessee Clinical Research Center, Dermatology / Research, Nashville⁽¹⁾

The injectable market continues to grow exponentially across all regions of the world. They are the most commonly performed cosmetic procedures being performed in our aesthetic practices. With this continued growth market, fake products, both in the toxin and filler arena, continue to be produced and to be sold to clinicians – unknowingly and knowingly, which has the potential of putting our patients at risk all for monetary gains. This presentation will continue our look into these products, where they are made, how realistic they have become, and how physicians and others are able to purchase these products anywhere and everywhere. We will also explore what steps are being taken to prevent their widespread distribution and what happens when our colleagues are caught using them.
