Aesthetic Medicine patients are usually very interested in the treatment of periorbital area. Indeed, in this particular area we can find many blemishes, due to several physiological causes.

Those are linear wrinkles, evidence of tear trough, protrusion of orbital margin, depressed temporal region.

We can achieve optimal results thanks to the synergy between treatments of Aesthetic Surgery and Aesthetic Medicine. A prior complete diagnostic evaluation, however, is needed. As long as an objective examination of static and dynamic and a correct scheduled program of planned treatments.

The author will present his own experience in the treatment, both surgical and medical, of this anatomical area.
