FRACTIONAL PICOSECOND LASERS – IS THIS THE NEXT CRAZE FOR PICOSECOND LASERS?

Michael Gold⁽¹⁾

Gold Skin Care Center / Tennessee Clinical Research Center, Dermatology / Research, Nashville⁽¹⁾

Picosecond lasers have become more and more popular as more of these devices are being developed and used by aesthetic clinicians. Originally designed for tattoos, then pigment concerns, we have now begun to use them for rejuvenation and for the treatment of scars with fractional or microarray hand pieces. Several clinical trials have recently been completed which show the benefit of these devices in rejuvenation and in treating scars. These pivotal clinical trials will be reviewed and how they can fit into one's cosmetic practice. Fractional picosecond lasers are making a difference – faster treatments with meaningful results – this will be reviewed in this presentation.
