The use of energy based devices (EBDs) has increased over the past several years and now we routinely recommend to our patients to incorporate EBDs into their therapeutic approaches for treating both acne and rosacea. This presentation will review some of the more common uses of EBDs when approaching patients with acne and rosacea (IPLs and PDLs) and also will present some of the newer EBDs – short pulsed 1064 nm therapy as well as a combination approach with 595 nm and 1319 nm together to treat these entities.
