Amman, Jordan⁽¹⁾*

Vitiligo is a multifactorial disease with an unknown etiology, it has different clinical presentations. There are several treatment modalities for vitiligo. Research demonstrated that Pseudocatalase with climatotherapy or Pseudocatalase with NB-UVB are observed to be the best treatment options for vitiligo. According to extensive research and clinical observation, the use of activated Pseudocatalase treatment significantly improved patient's well-being and quality of life.
