

ART IN DERMATOLOGY

THE BEGINNING AND THE END OF THE UNIVERSE: HOW ALL STARTED AND HOW ALL WILL END.

Thomas Boller ⁽¹⁾

Max-Planck-Institute for extraterrestrial physics, High-Energy Group, Garching, Germany ⁽¹⁾

In this lecture, I will present our current understanding of the evolution of the universe as well as questions that still remain to be answered. Did the Big Bang really happen? How will the Universe end? Will the acceleration of the Universe last forever? What is the mysterious dark matter and dark energy? Did the Universe really come from "Nothing"? We will also listen to the sound of the Universe via gravitational waves. This lecture on the fate of the Universe is not suitable for people with weak nerves!
