When studying nail disease, it is necessary to know about nail surgery

Every dermatologist need to know how to resolve surgical problems related to nails.

So I divided nail apparatus surgery in the following three categories.

Basic, meaning the one the every general dermatologist need to learn how to do it.

Intermediate, the type of surgery that every dermatologist needs to know about and probably learn to carry out.

Advanced, the type of nail surgery that every dermatologist-surgeon needs to know how to do successfully.

In this presentation we will demonstrate the different techniques to carry out a nail biopsy, management of onychocryptosis, benign and malignant tumor excision, nail apparatus implantation, pterygium correction, and nail bed scar repair.
