

GENETICS AND GENODERMATOSES

## GENETIC DISEASES AND MALIGNANCY IN PEDIATRIC POPULATION

*Jennifer Hand*<sup>(1)</sup>

*Mayo Clinic, Dermatology, Rochester, United States Of America*<sup>(1)</sup>

Using case examples, this talk will present inherited cancer syndromes that present during childhood with recognizable cutaneous features. Syndromes associated with genetic mutations that are detectable by a blood test and affect clinical management for the patient and family will be emphasized.
