

MUCOSAL DISEASES (ORAL, ANOGENITAL), EXTERNAL EYE DISEASE

## BEHCET'S DISEASE

*Meltem ONDER <sup>(1)</sup>*

*Gazi University, Dermatology, ANKARA, Turkey <sup>(1)</sup>*

Behcet's disease is currently considered as an "autoinflammatory disease" triggered by infection and environmental factors in genetically predisposed individuals. Although the disease is characterized by recurrent oral and genital aphthous ulcers and ocular involvement, it can affect multiple organ systems. In this session the etiopathogenesis, clinical features, diagnostic criteria and treatment approaches for Behcet's disease will be discussed.
